CRIME SHIELD

window and door security system

The original Crime Shield

Unobtrusive window security for all applications

Crime Shield was the first form of **insurance approved** window security conceived as an architectural product. There are no unsightly iron bars, steel mesh or expanded metal which may not even protect the glass.

Crime Shield doesn't disguise the attractiveness of existing windows and doors whether classical or contemporary, traditional or modern. It is a durable metal screen mounted in front of or behind existing windows. It is not a film or a fly-screen.

Crime Shield unobtrusively protects property and glazing by preventing access to windows.

Manufacture and installation (to all customer requirements) can often be a more economical proposition than frequently replacing the glazing or paying increased insurance premiums.

The Crime Shield window security system is manufactured from 2mm thick specially perforated steel plate, finished in external grade polyester powder coat paint, mounted into a two part extruded mitred and welded aluminium frame.

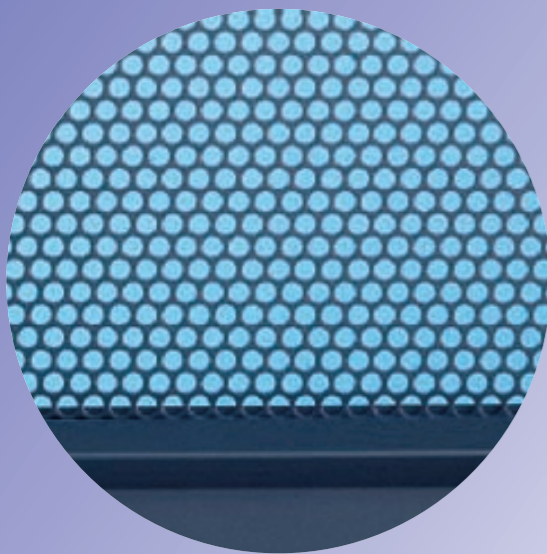

The perforated screen offers protection against unauthorised access to the property through the window, or door, whilst also protecting the glass against blows, rocks or even air gun pellets. For convenience, and easy access for window cleaning, opening units are also available.

Crime Shield has been fitted in many locations including offices, factories, supermarkets, places of worship, public buildings and shops.

Crime Shield is also ideal for use in smoking areas and bus shelters where savings of up to 30% have been achieved against conventional glazing.

Crime Shield is being tested and evaluated to achieve a number of accreditations. It is a unique security product.

TECHNICAL DATA

Barrier

2mm thick galvanised steel sheet with a matrix of perforations to provide a 60% free area. Coating - full polyester external grade sandwich locked into two piece aluminium frame system.

Frame

Architecturally designed heavy gauge two piece aluminium extrusion: mitred, keyed and welded. Finished in black or white electrostatically applied and baked powder coating - full polyester external grade. Optional frame colours available with relevant colour reference.

Fixing

Various options dependent on window type. Most common fixing types are inset mount (between reveals) and face fix direct to window frames, though many other options may be considered.

Additional Features

- 1 Insect Screen
- 2 Vibration Damper
- 3 Rear Cover (where applicable)
- 4 Frame cut outs
